

Level 2

Les Becs

Original Publisher: Pratham Books

Author: Rohan Dahotre

Illustrator: Rohan Dahotre

Translator: Sak Untala

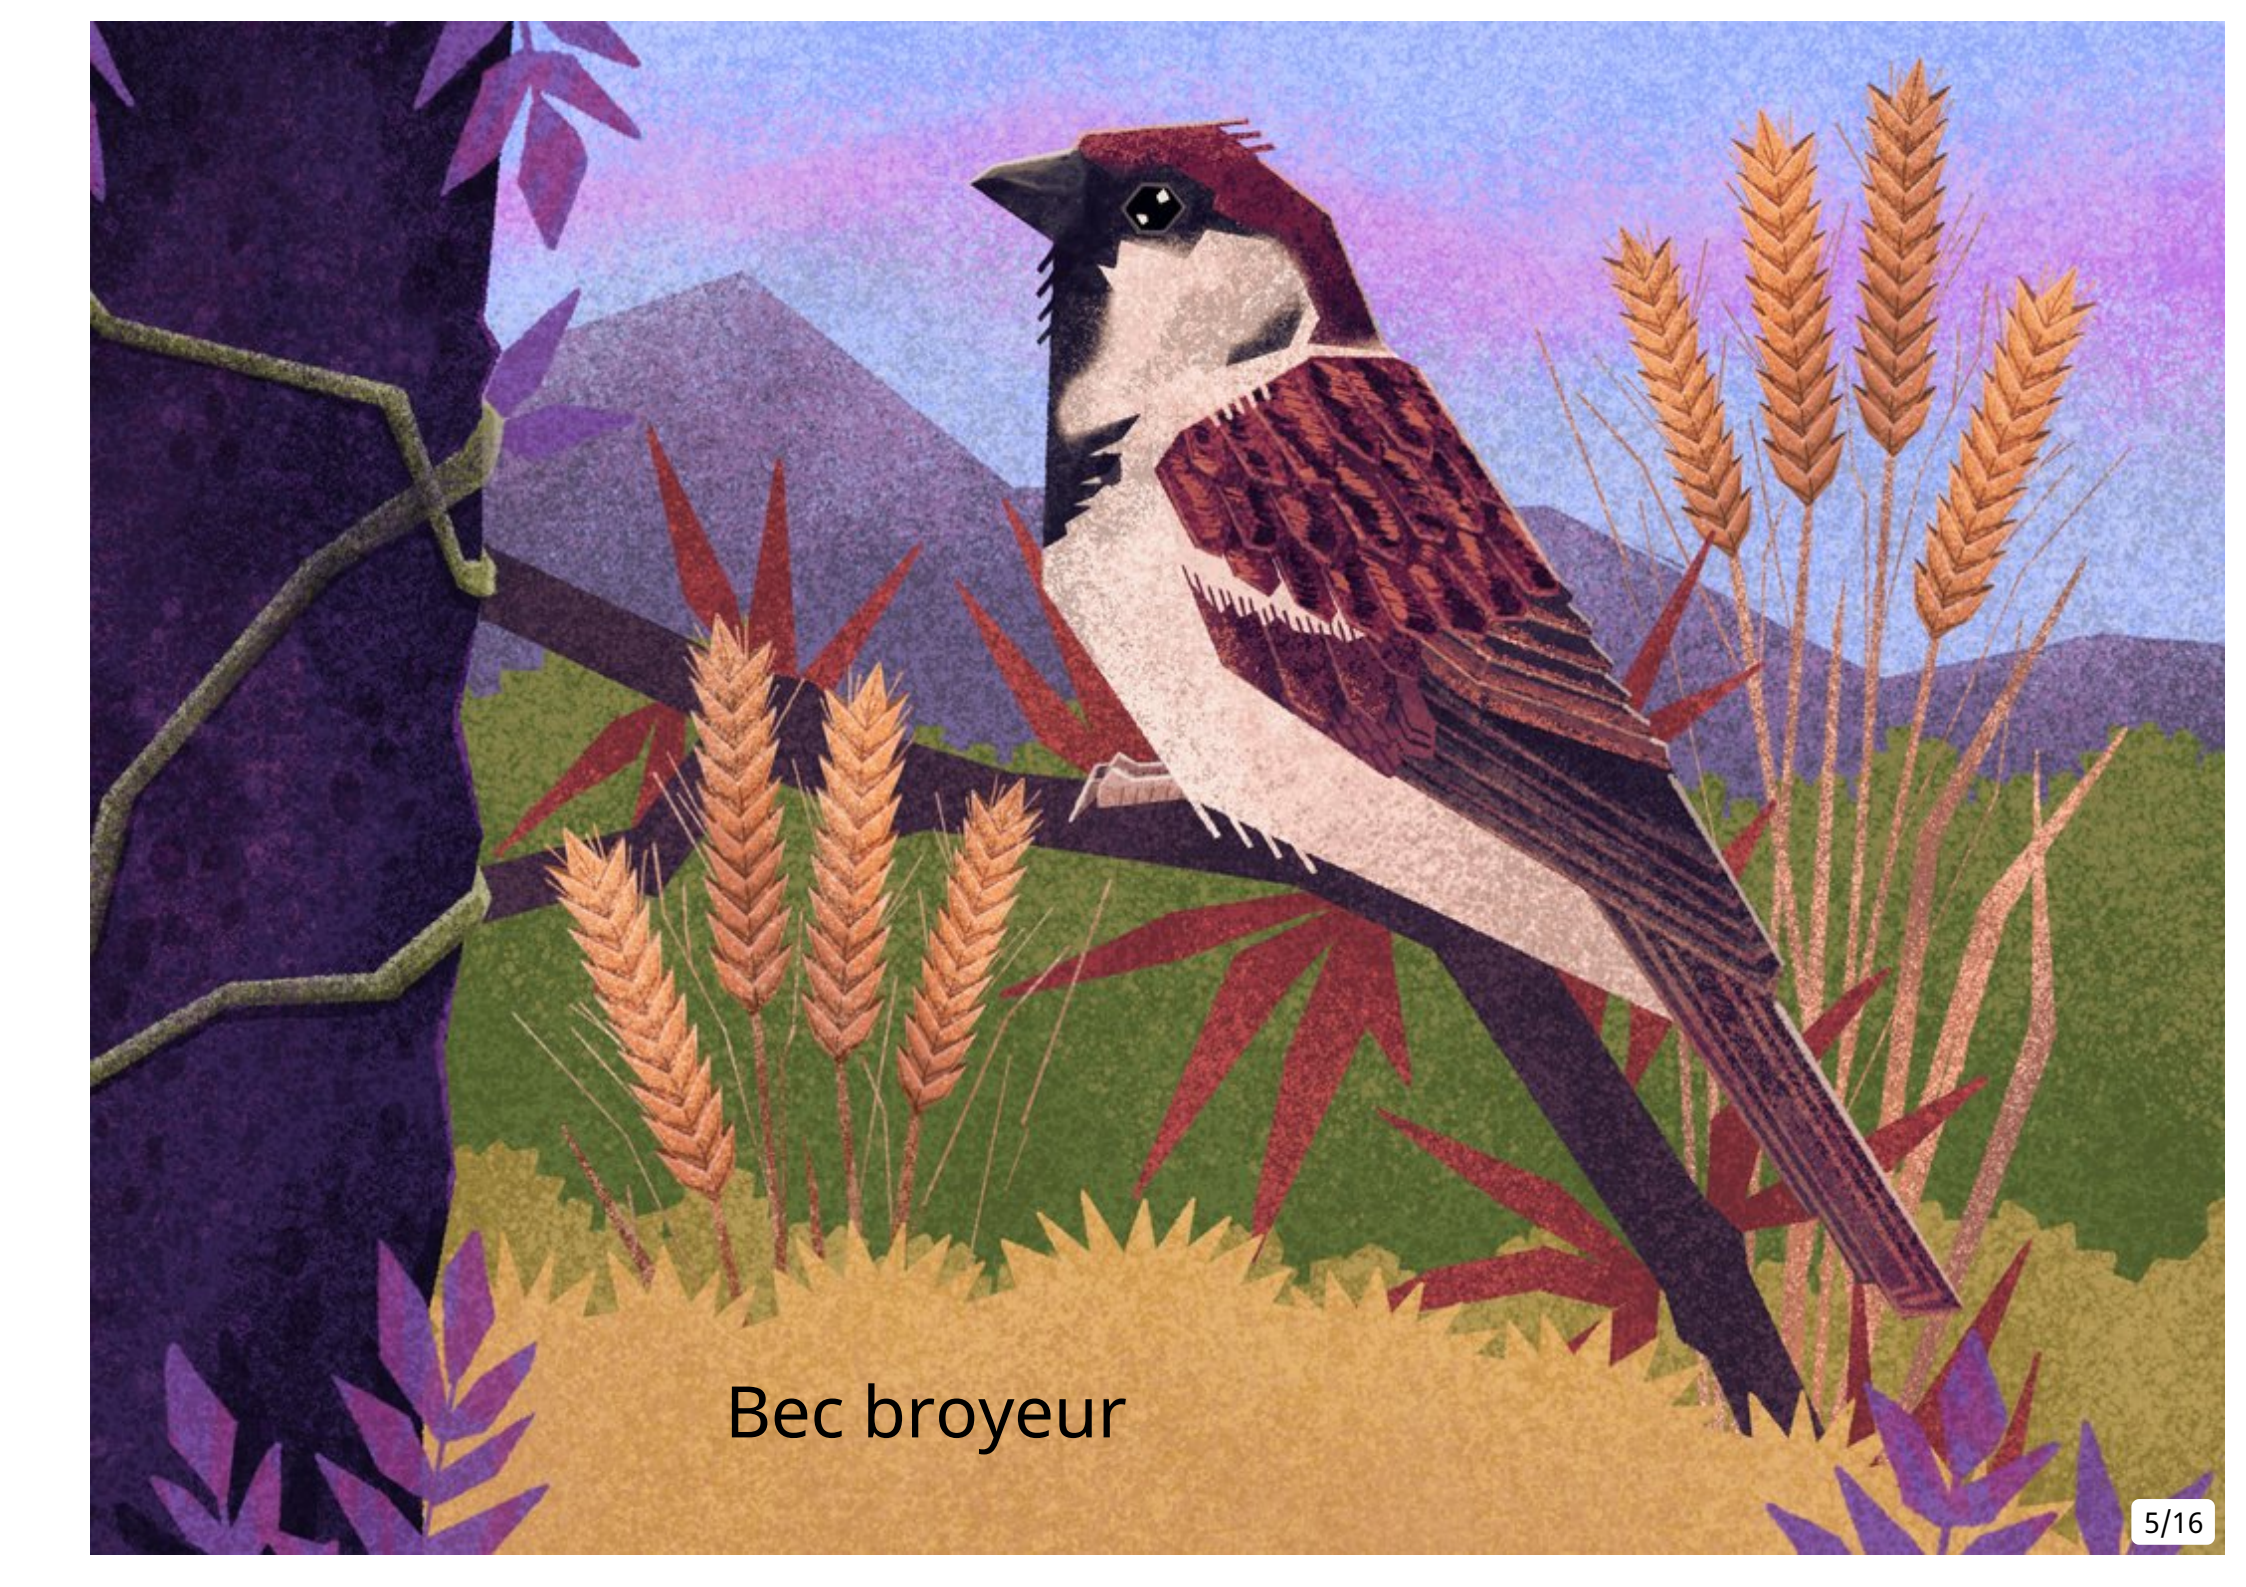

Bec perceur

Bec pêcheur

Bec camouflage

A stylized illustration of a cardinal sparrow perched on a dark branch. The bird has a reddish-brown head and back with white underparts. It is surrounded by golden wheat stalks and red leaves. The background features a green field, a purple mountain, and a blue sky with purple and pink hues. The overall style is painterly and vibrant.

Bec broyeur

Bec spatule

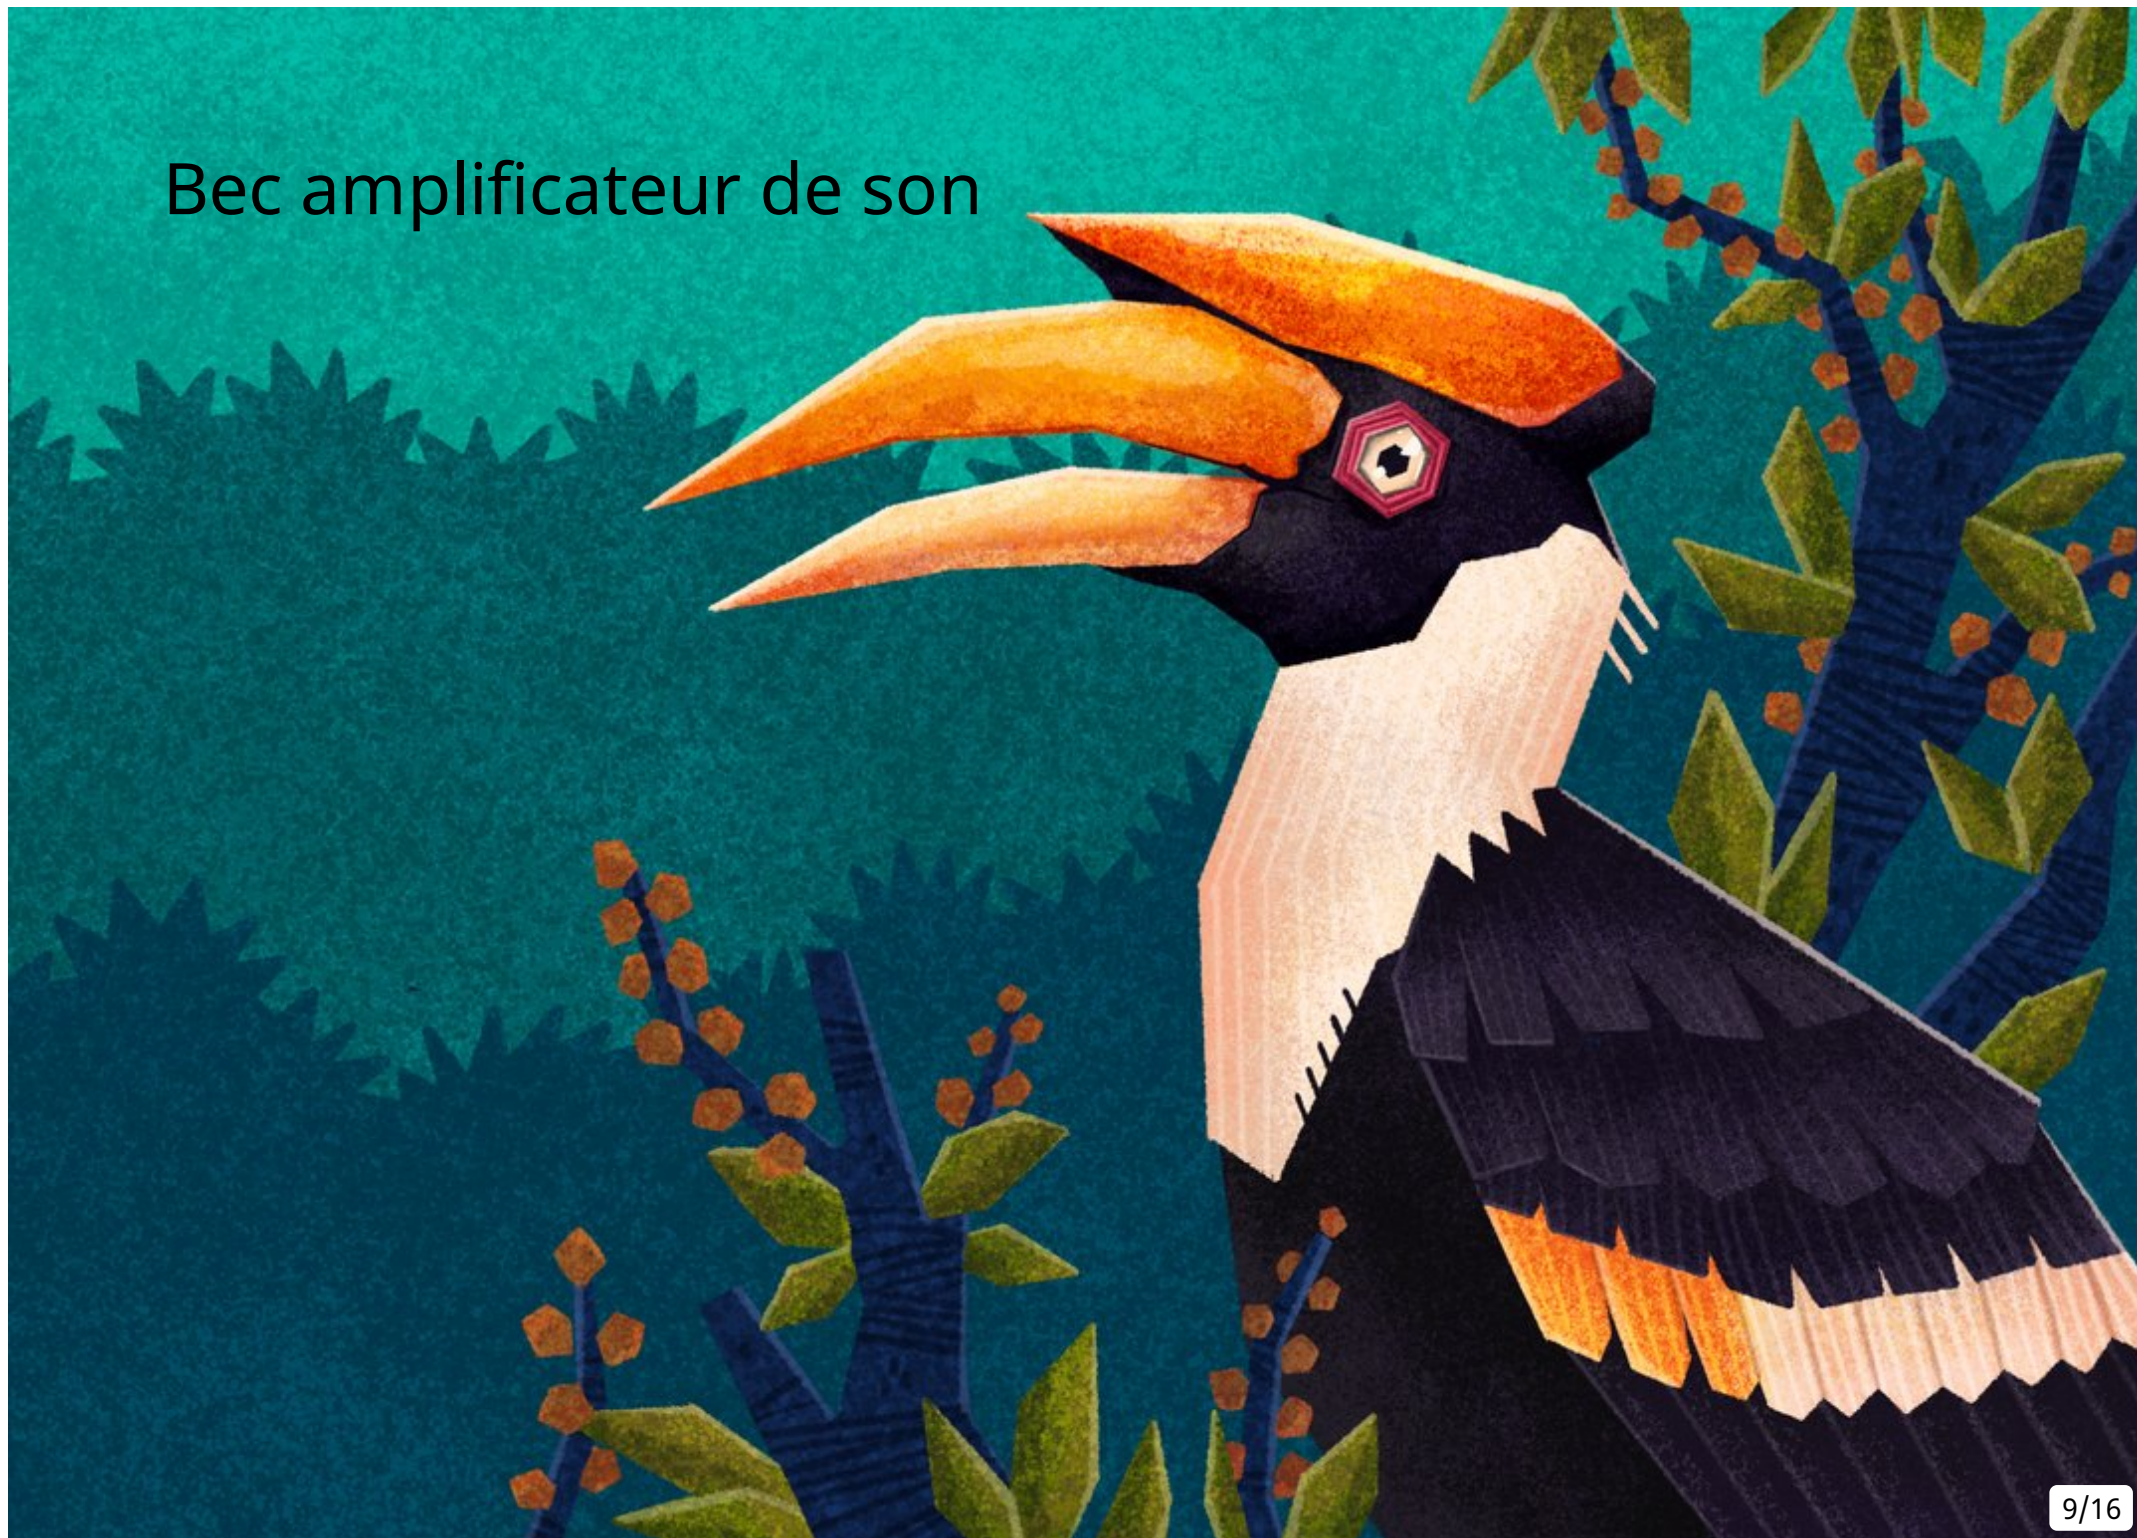

Bec filtre

Bec casse-noix

Bec amplificateur de son

Bec aiguille

Bec épée

Bec poche

Bec garde-manger

En savoir plus sur les becs

Les **piverts** possèdent un bec solide et pointu qui leur permet de percer des trous dans les arbres pour y faire leur nid ou pour trouver des insectes à manger.

Les **martins-pêcheurs** possèdent un long bec pointu qui ne ride pas la surface de l'eau quand ils plongent pour attraper des poissons.

Les **toucans** possèdent un bec léger et coloré qui leur sert à attraper des fruits et à attirer un partenaire.

Les **moineaux** possèdent un bec en forme de cône, court et pointu, qui leur permet de broyer des graines.

Les **spatules** utilisent leur long bec plat et arrondi pour fouiller la vase à la recherche de petits poissons, d'amphibiens et de crabes.

Le bec recourbé des **flamants roses** leur permet de filtrer du plancton, des petits poissons et des larves d'insectes dans les eaux peu profondes et boueuses.

Les **perroquets** utilisent leur bec en forme de pinces pour ouvrir les noix.

Les **calaos** possèdent un casque sur le bec qui leur permet d'amplifier les cris qu'ils émettent et de mieux les propager.

Les **souïmangas** possèdent un long bec recourbé qui leur permet d'aspirer le nectar et d'attraper des araignées ou des insectes au fond des fleurs.

Les **colibris** possèdent un très long bec fin qu'ils plongent au fond des fleurs pour aspirer le nectar.

Les **pélicans** pêchent les poissons avec leur bec en forme de poche. Ils recrachent l'eau puis engloutissent les poissons.

Les **macareux** sont capables d'attraper et de transporter beaucoup de poissons à la fois dans leur bec.
